

VCP in Freeze Drying 1000 - 5×10^{-4} mbar

Our gauges for your application

Our VCP is a Pirani vacuum gauge with a chemical resistant platinum rhodium filament. Its smooth surface avoids early contamination and ensures a particularly high durability of the filament.

The Analogline and Smartline transducers VCP are designed for **demanding applications** with **aggressive media**.

The VCP has been field tested in critical freeze drying applications for more than 6 months.

The filament endured the test without damage and free of residual contamination.

One of the world market leaders in the development and production of freeze dryers has relied on the quality of our precise vacuum sensors for many years.
